SUMMARY

Frontend Developer with **3 years of experience** building production web applications using **React, Next.js, TypeScript, and JavaScript**. Experienced in developing **responsive, accessible, and performance-focused interfaces**, integrating **REST APIs**, and building reusable component architectures. Sole frontend developer on an invitation-based travel platform, owning **flight, hotel, and train booking workflows**, data-heavy search interfaces, authentication, and third-party travel API integrations. Improved flight search-results rendering by **20–25%** through **lazy loading, code splitting, and memoization** on a Vite build. Additional experience with **state management, API integration, UI/UX, testing, and backend technologies** including Node.js and Express.js.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Material UI, Custom Hooks, Responsive Design, Component Architecture, Accessibility (WCAG)
State & Data	Redux, React Query, Context API, REST APIs, GraphQL, Axios
API & Backend	Node.js, Express.js, REST API Design, Middleware, Server-Side Pagination, Postman
Performance	Lazy Loading, Code Splitting, Memoization, Lighthouse Optimization, Debounced Search
Testing	Jest, React Testing Library, Unit Testing, Component Testing
Authentication	JWT, Protected Routes, Token Handling, Session Management
Tools & Practices	Vite, Git, GitHub, Jira, Figma, VS Code, Agile, Scrum

WORK EXPERIENCE

Software Engineer – Enspirite Technology Services Pvt. Ltd., Hyderabad **May 2024 – Aug 2026**

- Served as the **sole frontend developer** on an invitation-based event travel platform within a 9–11 member engineering team, building customer-facing interfaces for guests booking **flights, hotels, and trains**.
- Built end-to-end booking workflows covering **search, filtering, passenger and guest forms, fare rules, and checkout** using **React, TypeScript**, and reusable component architecture.
- Integrated third-party travel and GDS **REST APIs** for search and booking, implementing caching, background refetching, and shared state with **React Query, Axios, Context API**, and custom hooks.
- Developed the complete frontend authentication flow, including login, protected routes, **JWT token handling**, and session management.
- Optimized high-traffic search and checkout screens using **lazy loading, code splitting, and memoization** on a Vite build, improving flight search-results rendering by **20–25%**.
- Built the **Drive Stipend reimbursement workflow** end-to-end across frontend and backend, translating business requirements into a complete user-facing feature.
- Developed **responsive and WCAG-accessible interfaces** using Tailwind CSS and Material UI, and collaborated with backend engineers on GDS integrations including **Sabre and Travelport**, owning features from sprint planning through release.

Software Engineer – EnterPi Software Solutions Pvt. Ltd., Hyderabad **Sep 2023 – Apr 2024**

- Built multiple **React.js and TypeScript web applications** using reusable UI components, improving application load performance through **lazy loading and code splitting**.
- Integrated **REST APIs** and managed application state using **Redux and Context API**, implementing authentication, form validation, and core application workflows.
- Collaborated with backend and QA teams on **API integration, code reviews, testing, and release readiness** within an Agile development environment.

SELECTED PROJECTS

Splitzy – Expense Splitter

[Live] [GitHub]

Next.js, TypeScript, Node.js, Express, PostgreSQL, Prisma, React Query

- Implemented a **greedy debtor-creditor settlement algorithm** to minimize the number of transactions and wrapped expense writes in database transactions to maintain balance consistency.
- Designed a normalized **PostgreSQL schema with Prisma**, built a **REST API with JWT authentication**, and developed the frontend using React Query with persisted dark/light theming.

Product Explorer

[Live] [GitHub]

Next.js, TypeScript, Node.js, Express, React Query

- Improved **Lighthouse Performance from 63 to 89** using **next/image, lazy loading, code splitting, and memoization**, while adding skeleton loaders and accessible dark/light themes.
- Built a performance-focused product catalog with **server-side pagination**, combinable category and price filters, and **debounced search**, backed by a Node/Express REST API with query validation.

Portfolio Builder

[Live] [GitHub]

Next.js, TypeScript, Node.js, Express, PostgreSQL, Prisma, React Query

- Designed a **drag-to-reorder editor with live preview and autosave**, allowing users to rearrange resume sections and preview changes instantly before generating a static HTML export.
- Built four templates on a shared data model with user accounts, **JWT authentication**, and per-user ownership.

EDUCATION

B.E., Electrical and Electronics Engineering

Aug 2019 – May 2023

Vidya Jyothi Institute of Technology, Hyderabad

CGPA: 8.0/10
